

Black Manta Capital Partners Integrates Stellar to Expand Multi-Chain Tokenization Infrastructure

Luxembourg / San Francisco – 8 July 2026 – Black Manta Capital Partners (BMCP), leading European provider of Tokenization-as-a-Service and regulated digital asset solutions, today announced a strategic collaboration with the Stellar Development Foundation (SDF). The cooperation will enable future tokenization projects to be issued on Stellar and expands BMCP’s multi-chain infrastructure, offering clients greater flexibility in selecting the blockchain technology underlying their digital asset issuances.

“Integrating the Stellar network into our platform represents an important step in expanding our multi-chain capabilities,” said Alexander Rapatz, Managing Partner of Black Manta Capital Partners. The collaboration encompasses both the integration support and joint work on future tokenization projects, underscoring the commitment of both organizations to advancing the blockchain ecosystem. SDF will support Black Manta Capital Partners in integrating the Stellar blockchain into its investment and tokenization infrastructure, in order to expand the range of blockchain networks available for tokenized asset issuance.

Through the integration, Stellar will become an additional blockchain standard within BMCP’s investment portal, enabling future tokenization projects to be issued on the Stellar network. The move further strengthens BMCP’s multi-chain strategy, offering clients greater flexibility in selecting the underlying blockchain infrastructure that best fits their specific tokenization use cases. Alexander Rapatz: “Our clients operate across a wide range of industries and use cases, and providing multiple blockchain standards allows us to combine regulatory expertise with technological flexibility. The Stellar network’s infrastructure and ecosystem make it a strong addition to our tokenization stack.”

Strengthening the Ecosystem for Regulated Tokenization

The collaboration also reflects a shared commitment to advancing the adoption of blockchain based financial infrastructure, particularly regulated asset tokenization. “Black Manta Capital Partners has established itself as a key player in regulated tokenization in Europe,” said Jose Fernandez da Ponte, President and Chief Growth Officer of the Stellar Development Foundation. “By integrating Stellar into its platform, BMCP is expanding the options available to those looking to leverage blockchain technology for real-world asset tokenization. We look forward to supporting their continued development and ecosystem growth.”

The integration will enable BMCP to explore and launch new tokenization initiatives on the Stellar network, further broadening the technological foundation of its platform and supporting the continued evolution of digital capital markets.

About Black Manta Capital Partners

Black Manta Capital Partners is the leading full-service provider of Tokenization as a Service and umbrella solutions in the DACH region (Germany, Austria, and Switzerland). Founded in Luxembourg in 2018 and headquartered in Munich and Vienna, the company offers all the necessary services for the digital representation of assets on a blockchain to corporate clients across a wide range of industries. Its core philosophy is the use of cutting-edge technological innovations for project financing and financial services. As a leading player in this field, Black Manta Capital Partners holds a German BaFin license and is therefore regulated in all 27 EU member states. The company also has a US branch and, since 2023, is registered as a foreign broker/dealer in China with offices in Hong Kong and Shanghai.
